

Package ‘GroupSeq’

January 20, 2025

Title Group Sequential Design Probabilities - With Graphical User Interface

Version 1.4.3

Description Computes probabilities related to group sequential designs for normally distributed test statistics. Enables to derive critical boundaries, power, drift, and confidence intervals of such designs. Supports the alpha spending approach by Lan-DeMets (1994) <[doi:10.1002/sim.4780131308](https://doi.org/10.1002/sim.4780131308)>.

Imports tcltk, tcltk2, mvtnorm

Suggests knitr, tinytest, rmarkdown, ggplot2, gridExtra

VignetteBuilder knitr

Contents

start_gui	2
Index	3

`start_gui`*Start GroupSeq*

Description

Starts the graphical user interface.

Usage

```
start_gui()
```

Value

No return value, called for side effects.

Examples

```
start_gui()
```

Index

`start_gui`, 2
