

# Package ‘NAEPirtparams’

January 20, 2025

**Version** 1.0.0

**Date** 2021-02-16

**Title** IRT Parameters for the National Assessment of Education Progress

**Author** Sun-joo Lee [aut, cre],  
Eric Buehler [aut],  
Paul Bailey [ctb]

**Maintainer** Sun-joo Lee <sjlee@air.org>

**Description** This data package contains the Item Response Theory (IRT) parameters for the National Center for Education Statistics (NCES) items used on the National Assessment of Education Progress (NAEP) from 1990 to 2015. The values in these tables are used along with NAEP data to turn student item responses into scores and include information about item difficulty, discrimination, and guessing parameter for 3 parameter logit (3PL) items. Parameters for Generalized Partial Credit Model (GPCM) items are also included. The adjustments table contains the information regarding the treatment of items (e.g., deletion of an item or a collapsing of response categories), when these items did not appear to fit the item response models used to describe the NAEP data. Transformation constants change the score estimates that are obtained from the IRT scaling program to the NAEP reporting metric. Values from the years 2000 - 2013 were taken from the NCES website <<https://nces.ed.gov/nationsreportcard/>> and values from 1990 - 1998 and 2015 were extracted from their NAEP data files. All subtest names were reduced and homogenized to one word (e.g. ``Reading to gain information" became ``information"). The various subtest names for univariate transformation constants were all homogenized to ``univariate".

**License** GPL-2

**Depends** R (>= 3.5.0)

**NeedsCompilation** no

**Encoding** UTF-8

**RoxygenNote** 7.1.1

**LazyData** true

**Repository** CRAN

NAEPirtparams-package *NAEP IRT Parameter Tables*

---

### Description

The NAEPirtparams package provides NAEP IRT parameters, item adjustment information, and subtest transformation information for NAEP assessments.

### Details

The package provides a table called `parameters`, which has item parameters by year, subject, and grade. The `adjustments` table provides the item adjustment information that NAEP implemented in scaling (i.e., item deletions and collapsed score categories). The table `transformations` has the location, scale, and weights for the subtests that make up a test.

---

`adjustments` *NAEP IRT item adjustments.*

---

### Description

This data table contains the item adjustment information that NAEP implemented in scaling from 2000 to 2013. The handful of items with responses that do not fit the item response models were deleted or had the scoring categories collapsed before the final scaling. To find all adjustments and deletions for an assessment, filter the data table by level, subject, and year. Assessments in 2000 also require filtering by accommodations.

### Usage

`adjustments`

### Format

A data frame with columns

**source** source of data, character

**level** grade or age level of test, integer

**levelType** "grade" or "age", character

**NAEPid** test item ID, character  
**accommodations** "accom" or "no-accom", character  
**subject** subject of test, character  
**year** year of test, integer  
**adjustment** "Collapsed" or "Deleted", character  
**from** possible scores before adjustment, character  
**to** possible scores after adjustment, character

parameters

*NAEP IRT parameters.*

---

## Description

This data table contains NCES NAEP Assessment IRT parameters from 1990 to 2015. To find all item parameters for an assessment, filter the data table by level, subject, and year. Assessments from 1990 to 2000 also require filtering by assessmentCode and accommodations.

## Usage

parameters

**Format**

A data frame with columns

**source** source of data, character

**level** grade or age level of test, integer

**levelType** "grade" or "age", character

**NAEPid** test item ID, character

**assessmentCode** "State" or "National", character

**accommodations** "accom" or "no-accom", character

**subtest** subtest within subject, character

**subject** subject of test, character

**year** year of test, integer

**a** slope or a parameter, numeric

**b** difficulty or d parameter, numeric

**c** guessing or g parameter, numeric

**d1** location of cut point 1 for polytomous item, numeric

**d2** location of cut point 2 for polytomous item, numeric

**d3** location of cut point 3 for polytomous item, numeric

**d4** location of cut point 4 for polytomous item, numeric

**d5** location of cut point 5 for polytomous item, numeric

transformations      *NAEP transformation constants.*

---

### Description

This data table contains NCES NAEP Assessment transformation constants from 1990 to 2015. To find the transformation constants for an assessment, filter the data table by level, subject, and year. Some assessments also require filtering by assessmentCode and/or accommodations.

### Usage

```
transformations
```

### Format

A data frame with columns

**source** source of data, character

**level** grade or age level of test, integer

**assessmentCode** "State" or "National", character

**accommodations** "accom" or "no-accom", character

**subtest** subtest within subject, character

**subject** subject of test, character

**year** year of test, integer

**scale** scale of subtest, numeric

**location** location of subtest, numeric

**subtestWeight** weight of subtest, numeric
