

# Package ‘opendatatoronto’

October 14, 2022

**Title** Access the City of Toronto Open Data Portal

**Version** 0.1.5

**Description** Access data from the “City of Toronto Open Data Portal” (<<https://open.toronto.ca>>) directly from R.

**License** MIT + file LICENSE

**URL** <https://sharlagelfand.github.io/opendatatoronto/>,  
<https://github.com/sharlagelfand/opendatatoronto/>

**BugReports** <https://github.com/sharlagelfand/opendatatoronto/issues>

**Depends** R (>= 2.10)

**Imports** ckanr (>= 0.6.0), magrittr, readxl, sf, tibble, xml2, curl

**Suggests** covr, dplyr, ggiraph, ggplot2, knitr, purrr, tidyr,  
rmarkdown, testthat

**VignetteBuilder** knitr

**Encoding** UTF-8

**RoxygenNote** 7.1.1

**NeedsCompilation** no

**Author** Sharla Gelfand [aut, cre],  
City of Toronto [cph, fnd]

**Maintainer** Sharla Gelfand <[sharla.gelfand@gmail.com](mailto:sharla.gelfand@gmail.com)>

**Repository** CRAN

**Date/Publication** 2022-04-13 11:30:05 UTC

## R topics documented:

browse_package . . . . .	2
browse_portal . . . . .	2
browse_resource . . . . .	3
get_resource . . . . .	4
list_packages . . . . .	4

list_package_resources . . . . .	5
search_packages . . . . .	6
show_package . . . . .	6

<b>Index</b>	<b>8</b>
--------------	----------

---

browse_package	<i>Open the package's page in your browser</i>
----------------	--

---

### Description

Opens a browser to the package's page on the City of Toronto Open Data Portal.

### Usage

```
browse_package(package)
```

### Arguments

package	A way to identify the package. Either a package ID (passed as a character vector directly), a single package resulting from <a href="#">list_packages</a> or <a href="#">search_packages</a> , or the package's URL from the portal.
---------	--

### Value

A browser is opened to the package's page on the City of Toronto Open Data Portal website if the session is interactive. The URL is returned as a character string.

### Examples

```
ttc_subway_delays <- search_packages("ttc subway delay")
browse_package(ttc_subway_delays)
browse_package("https://open.toronto.ca/dataset/business-improvement-areas/")
```

---

browse_portal	<i>Open the City of Toronto Open Data Portal in your browser</i>
---------------	--

---

### Description

Opens a browser to <https://open.toronto.ca>.

### Usage

```
browse_portal()
```

**Value**

A browser is opened to the City of Toronto Open Data Portal website if the session is interactive. The URL is returned as a character string.

**Examples**

```
browse_portal()
```

---

browse_resource	<i>Open the resource's package page in your browser</i>
-----------------	---

---

**Description**

Opens a browser to the resource's package page on the City of Toronto Open Data Portal.

**Usage**

```
browse_resource(resource)
```

**Arguments**

resource      A way to identify the resource. Either a resource ID (passed as a character vector directly) or a single resource resulting from [list\\_package\\_resources](#).

**Value**

A browser is opened to the resource's package page on the City of Toronto Open Data Portal website if the session is interactive. The URL is returned as a character string.

**Examples**

```
ttc_subway_delays <- search_packages("ttc subway delay")
res <- list_package_resources(ttc_subway_delays)
browse_resource(res[1, ])
```

---

get_resource	<i>Download a resource into your R session</i>
--------------	--

---

**Description**

Download a resource from the portal directly into your R session. CSV, XLS, XLSX, XML, JSON, SHP, ZIP, and GeoJSON resources are supported.

**Usage**

```
get_resource(resource)
```

**Arguments**

resource	A way to identify the resource. Either a resource ID (passed as a character vector directly) or a single resource resulting from <a href="#">list_package_resources</a> .
----------	---

**Value**

In most cases, the resource is returned as a tibble or list of tibbles. If it is a spatial resource (i.e. SHP or GeoJSON), it is returned as an sf object.

**Examples**

```
list_package_resources("https://open.toronto.ca/dataset/neighbourhoods/") %>%  
head(1) %>%  
get_resource()
```

---

list_packages	<i>List packages</i>
---------------	----------------------

---

**Description**

List packages available on the portal.

**Usage**

```
list_packages(limit = 50)
```

**Arguments**

limit	The maximum number of packages to return. The default is 50.
-------	--

**Value**

A tibble of available packages and metadata, including `title`, `id`, `topics`, `civic_issues`, `excerpt`, `publisher`, `dataset_category`, `num_resources` (the number of resources in the package), `formats` (the different formats of the resources), `refresh_rate` (how often the package is refreshed), and `last_refreshed` (the date it was last refreshed).

**Examples**

```
list_packages(5)
```

---

```
list_package_resources
```

*List resources for a package*

---

**Description**

List resources for a package on the portal.

**Usage**

```
list_package_resources(package)
```

**Arguments**

<code>package</code>	A way to identify the package. Either a package ID (passed as a character vector directly), a single package resulting from <code>list_packages</code> or <code>search_packages</code> , or the package's URL from the portal.
----------------------	--

**Value**

A tibble of resources along with metadata, including `name`, `id`, `format` (the format of the resource file), and `last_modified` (the date the resource was last modified).

**Examples**

```
list_package_resources("1db34737-ffad-489d-a590-9171d500d453")  
list_package_resources("https://open.toronto.ca/dataset/ttc-subway-delay-data")
```

---

search_packages	<i>Search packages by title</i>
-----------------	---------------------------------

---

**Description**

Search portal packages by title.

**Usage**

```
search_packages(title, limit = 50)
```

**Arguments**

title	Title to search (case-insensitive).
limit	Maximum number of packages to return. The default is 50. The maximum limit is 1000.

**Value**

A tibble of matching packages along with package metadata, including title, id, topics, civic\_issues, excerpt, publisher, dataset\_category, num\_resources (the number of resources in the package), formats (the different formats of the resources), refresh\_rate (how often the package is refreshed), and last\_refreshed (the date it was last refreshed).

**Examples**

```
search_packages("ttc")
```

---

show_package	<i>Show a package's metadata</i>
--------------	----------------------------------

---

**Description**

Show a portal package's metadata.

**Usage**

```
show_package(package)
```

**Arguments**

package	A way to identify the package. Either a package ID (passed as a character vector directly) or the package's URL from the portal.
---------	--

**Value**

A tibble including `title`, `id`, `topics`, `civic_issues`, `excerpt`, `publisher`, `dataset_category`, `num_resources` (the number of resources in the package), `formats` (the different formats of the resources), `refresh_rate` (how often the package is refreshed), and `last_refreshed` (the date it was last refreshed).

**Examples**

```
show_package("c01c6d71-de1f-493d-91ba-364ce64884ac")
```
