

Package ‘pgraph’

October 14, 2022

Type Package

Title Build Dependency Graphs using Projection

Version 1.6

Date 2020-01-20

Imports SAM, energy, glasso, glmnet, splines

Description Implements a general framework for creating dependency graphs using projection as introduced in Fan, Feng and Xia (2019)<[arXiv:1501.01617](#)>. Both lasso and sparse additive model projections are implemented. Both Pearson correlation and distance covariance options are available to generate the graph.

greg

*Regularized graphical model estimation***Description**

greg calculate the regularized graphical model estimation using lasso, scad and adaptive lasso penalties. It report the results in the form of roc results for each method.

Usage

```
greg(z, A, eps = 1e-15, rholist = NULL, gamma = 0.5, trace = FALSE)
```

Arguments

<code>z</code>	<code>n * p</code> dimensional matrix
<code>A</code>	<code>p * p</code> true graph
<code>eps</code>	a tolerance level for thresholding
<code>rholist</code>	a sequence of penalty parameters
<code>gamma</code>	the adaptive lasso penalty parameter
<code>trace</code>	whether to trace to estimation process.

Value

a list.	
<code>roc.lasso</code>	roc results for lasso
<code>roc.scad</code>	roc results for scad
<code>roc.alasso</code>	roc results for adaptive lasso

See Also

[pgraph](#), [roc](#), [projcov](#)

Examples

```
set.seed(0)
p = 20;
n = 300;
tmp=runif(p-1,1,3)
s=c(0,cumsum(tmp));
s1=matrix(s,p,p)
cov.mat.true=exp(-abs(s1-t(s1)))
prec.mat.true=solve(cov.mat.true);
a=matrix(rnorm(p*n),n,p)
data.sa=a%*%chol(cov.mat.true);
true.graph = outer(1:p,1:p,f<-function(x,y){(abs(x-y)==1)})
greg.fit = greg(data.sa, true.graph)
```

```

auc.lasso = sum(diff(greg.fit$roc.lasso[,1])*greg.fit$roc.lasso[-1,2])
auc.alasso = sum(diff(greg.fit$roc.alasso[,1])*greg.fit$roc.alasso[-1,2])
auc.scad = sum(diff(greg.fit$roc.scad[,1])*greg.fit$roc.scad[-1,2])
auc.lasso
auc.alasso
auc.scad

```

pgraph

*Calculate the Conditional Dependency Graph***Description**

pgraph calculate the conditional dependency graph (with/without external factors) via projection using lasso or sparse additive model.

Usage

```

pgraph(
  z,
  f = NULL,
  method = c("lasso", "sam", "ols"),
  cond = TRUE,
  R = 199,
  randSeed = 0,
  trace = FALSE
)

```

Arguments

<code>z</code>	<code>n * p</code> dimensional matrix
<code>f</code>	<code>n * q</code> factor matrix. Default = 'NULL'.
<code>method</code>	projection method. Default = 'lasso'.
<code>cond</code>	whether to create a conditional graph or unconditional graph. Default = TRUE. If <code>cond</code> = FALSE, <code>f</code> must be provided.
<code>R</code>	number of random permutations for the test.
<code>randSeed</code>	the random seed for the program. Default = 0.
<code>trace</code>	whether to trace to estimation process.

Value

a list to be used to calculate the ROC curve.

<code>statmat.pearson</code>	matrix with pearson correlation test
<code>statmat.dcov</code>	matrix with distance covariance test

Examples

```
library(splines)
set.seed(0)
p = 5;
n = 100;
tmp=runif(p-1,1,3)
s=c(0,cumsum(tmp));
s1=matrix(s,p,p)
cov.mat.true=exp(-abs(s1-t(s1)))
prec.mat.true=solve(cov.mat.true);
a=matrix(rnorm(p*n),n,p)
data.sa=a%*%chol(cov.mat.true);
true.graph = outer(1:p,1:p,f<-function(x,y){(abs(x-y)==1)})
methodlist = c('lasso','sam')
fit = vector(mode='list', length=2)
info = vector(mode='list', length=2)
auc = NULL
for(i in 1:2){
  method = methodlist[i]
  fit[[i]] = pgraph(data.sa, method = method)
  info[[i]] = roc(fit[[i]]$statmat.pearson, true.graph)
  auc[i] = sum(~diff(info[[i]][,1])*info[[i]][-1,2])
  cat(method, ': auc=', auc[i], '\n')
}
```

projcore

Calculate the Projected matrix given factors

Description

`projcore` calculate the projected matrix given factors.

Usage

```
projcore(
  x,
  b,
  method = c("lasso", "sam", "ols"),
  one.SE = TRUE,
  refit = TRUE,
  randSeed = 0
)
```

Arguments

x	first vector
b	factor matrix
method	projection method. Default = 'lasso'.
one.SE	whether to use the 1se rule for glmnet. Default = TRUE.
refit	whether to refit the selected model. Default = TRUE.
randSeed	the random seed for the program. Default = 0.

Value

eps	the residual matrix after projection
-----	--------------------------------------

See Also

[greg](#), [roc](#), [pgraph](#)

projcov

Calculate the Projected Covariance of Two Vectors

Description

projcov calculate the projected distance covariance of two vectors given common factors.

Usage

```
projcov(
  x,
  y,
  b,
  method = c("lasso", "sam", "ols"),
  one.SE = TRUE,
  refit = TRUE,
  R = 199,
  randSeed = 0,
  normalized = FALSE
)
```

Arguments

x	first vector
y	second vector
b	factor matrix
method	projection method. Default = 'lasso'.
one.SE	whether to use the 1se rule for glmnet. Default = TRUE.

<code>refit</code>	whether to refit the selected model. Default = TRUE.
<code>R</code>	number of random permutations for the test.
<code>randSeed</code>	the random seed for the program. Default = 0.
<code>normalized</code>	whether to normalized by S2. Default = FALSE.

Value

a list.	
<code>test.pearson</code>	pearson correlection test statistic
<code>test.dcov</code>	distance covariance test statistic
<code>xeps</code>	residual of projection of x on b
<code>yeps</code>	residual of projection of y on b

See Also

[greg](#), [roc](#), [pgraph](#)

Examples

```
library(splines)
set.seed(0)
K = 3
n = 100
b = matrix(rnorm(K*n), n, K)
bx = 1:3
by = c(1, 2, 2)
x = b%*%bx+rnorm(n)
y = b%*%by+rnorm(n)
fit1 = projcov(x, y, b, method = 'lasso')
fit2 = projcov(x, y, b, method = 'sam')
```

`roc`

Compute the Projected Graph

Description

`roc` calculate the fpr and tpr for the roc curve

Usage

```
roc(a, a0)
```

Arguments

<code>a</code>	p * p estimated graph
<code>a0</code>	p * p true graph

Value

a list.

tpr tpr sequence

fpr fpr sequence
